Sequence 8, Application US/0999672

Patent No. US20020127655al

GENERAL INFORMATION:

APPLICANT: Eric H. Holmes et al.

TITLE OF INVENTION: NUCLEIC ACIDS AND PROTEINS OF A RAT GANGLIOSIDE

TITLE OF INVENTION: GM.-SPECIFIC ALPHA1-2 FUCOSYLTRANSFERASE AND USES

FILE REFERENCE: 6511-029

CURRENT FILING DATE: 2001-10-31

PRIOR APPLICATION NUMBER: US/09/959,672

CURRENT FILING DATE: 2001-10-31

PRIOR PAPLICATION NUMBER: US/09/228,886

PRIOR FILING DATE: 1999-04-26

Pred. No. is the number of results predicted by charce to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                         ALTERNATIVE PRODUCTS:

ALTERNATIVE PRODUCTS:
TWO FORMS ARE PRODUCED BY THE USE OF
ALTERNATIVE INTIATION CODONS IN THE SAME READING FRAME.

TISSUE SPECIFICITY: SMALL INTESTINE, COLON AND LUNG.

MISCELLANBOUS: THERE ARE TWO GENES (FUTI AND FUT2) WHICH ENCODE
GALACYOSIDE 2.1-FUCGSYLTRANSFERASE. THEY ARE EXPRESSED IN A
TISSUE-SPECIFIC MANNER WITH EXPRESSION RESTRICTED TO CELLS OF
MESODERMAL OR ENDODERMAL ORIGIN RESPECTIVELY.

SIMILARITY: BELONGS TO THE GLYCOSYLTRANSFERASE FAMILY 11.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

-!-CATALYTIC ACTIVITY: GDP-L-fucose + beta-D-galactosyl-R = GDP + alpha-L-fucosyl-1.2 beta-D-galactosyl-R.
-!-PATHWAY: Glycosylation.
-!-SUBCELLOLAR LOCATION: TYPE II MEMBRANE PROTEIN. MEMBRANE-BOUND FORM IN TRANS CISTERNAE OF GOLGI (BY SIMILARITY).
-!-SUBCELLOLAR COCTITON: THOSE IN MEMBRANE FROUDE GALACTOSIDE 2-L-FUCOSYLITRANSFERASE.
-!-SIMILARITY: BELONGS TO THE GLYCOSYLTRANSFERASE FAMILY 11.

MISCELLANBOUS: THERE ARE TWO GENES (FUTI AND FOT2) WHICH ENCODE GALACTOSIDE 2-L-FUCOSYLTRANSFERASE. THEY ARE EXPRESSED IN A TISSUE-SPECIFIC MANNER WITH EXPRESSION RESTRICTED TO CELLS OF MESODERMAL OR ENDODERMAL ORIGIN RESPECTIVELY.
SIMILARITY: BELONGS TO THE GLYCOSYLTRANSFERASE FAMILY 11.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Piau J.-P., Labarriere N., Dabouis G., Denis M.G.;
"Evidence for two distinct alpha(1,2)-fucosyltransferase genes
differentially expressed throughout the rat colon.";
Biochem. J. 300:623-626(1994).
-!- CATALYPIC ACTIVITY: GDP-L-fucose + beta-D-galactcsyl-R = GDP
alpha-L-fucosyl-1,2-beta-D-galactosyl-R.

Biol. Chem. 271:27810-27817(1996).

-!- FUNCTION: Catalyzes the addition of fucose in alpha 1-6 linkage to the first Glonac residue, next to the peptide chains in N-glycans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SH3-BINDING (POTENTIAL)
IMPORTANT FOR DONOR SUBSTRATE BINDING (BY
SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The pH optimum is 7.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            glucosaminyl)aspáragine.

--- PATHWAY: Glycosylation.

--- SUBCELLULAR LOCATION: Type II membrane protein. Membrane-bound form in trans cisternae of Golgi (By similarity).

--- TISSUE SPECIFICITY: HIGHEST EXPRESSION IN BRAIN.

--- SIMILARITY: COWTAINS 1 SH3 DOMAIN.

--- SIMILARITY: BELONGS TO THE GLYCOSYLTRANSFERASE FAMILY 23.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

                                                                                                                                                                                                                                                        -i- PATHWAY: Glycosilation.
-i- SUBCELIDIAR LOCATION: Type II membrane protein. Membrane-bound form in trans cisternee of Golgi (By similarity).
-i- ALTERNATIVE PRODUCTS: 2 isoforms; 1 (shown here) and 2/retinal; are produced by alternative splicing.
-i- SIMILARITY: CONTAINS 1 SH3 DOMAIN.
-i- SIMILARITY: BELONGS TO THE GLYCOSYLTRANSFERASE FAMILY 23.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MISSING (IN ISOFORM 2).

PATHWAY: Glycosylation.
SUBCELLULAR LOCATION: Type II membrane protein. Membrane-bound form in trans cisternae of Golgi (By similarity).
SIMILARITY: CONTAINS I SH3 DOWAIN.
SIMILARITY: BELONGS TO THE GLYCOSYLTRANSPERASE FAMILY 23.
